Project Initialization, Design the Sextant Frontend Display the User's Public IP Stream Data from a Networked Service Present Your Work

PERSONAL PROJECTS

Portfolio website

- My portfolio website is a stunning showcase of my work and skills, created using React JS. The website is designed to be user-friendly, with a clean and modern interface that allows visitors to easily navigate through my projects and learn more about me.

Textutils-React

- To effectively analyze text, there are several tools that can be utilized. For example, converting text to uppercase or lowercase can help to standardize the formatting. Additionally, an email extractor can be useful for quickly gathering contact information from large bodies of text.

Fully responsive website.

- I recently completed the creation of a fully responsive website. This means that the website is accessible and user-friendly on any device, whether it's a desktop computer, laptop, tablet, or smartphone.

Netflix Clone

- Created a Netflix clone using HTML and CSS. It was a fun project and a great opportunity to practice my web development skills.
